

MIYAR

Position governance before hiring

Connect the business need to a job description, evaluation and documented approval

Innovation center and institutional pilot presentation

The problem: one decision, disconnected files

Fragmented information

- | The business case sits in an email
- | The job description is a separate document
- | Evaluation and reviews live elsewhere

A decision that is hard to trace

- | What justifies adding the position?
- | Which revision did each reviewer approve?
- | How does the grade relate to the role?

The commitment starts before recruitment

Every position needs a reviewable business case

- | A clear need and alternatives considered
- | Defined responsibilities and decision rights
- | Outcomes that can be measured after hiring

The solution: a connected position record

Miyar brings the decision evidence into one workflow

- | Business need and occupation reference
- | Job description and evaluation result
- | Institutional reviews tied to the revision

How Miyar works

1 Request

Business case, alternatives and scope

2 Design

Reference, description and competencies

3 Evaluate

Score, grade and evaluation evidence

4 Approve

Four stages and a documented package

The product: a reviewable position record

Mechanical engineer

Occupation code	214401
Education specialization	071501 Mechanical engineering
Record content	Purpose, responsibilities, authority and requirements
Evaluation result	Grade and rationale tied to the reviewed revision

Reference example. Importing a code does not approve a position.

Clear responsibilities and measurable outcomes

Proposed KPIs

- | Reduce equipment downtime by 20%
- | Complete 95% of planned maintenance
- | Document every maintenance report

RACI example for a maintenance plan

- | R Mechanical engineer executes
- | A Engineering manager is accountable
- | C Operations and safety are consulted
- | I Asset owner is informed

Illustrative targets and responsibilities, not achieved platform results.

Governance: four specialist reviews

1 Organization development

Role need, description and department consultation

2 Total Rewards

Evaluation, grade and proposed salary range

3 Finance & Planning

Headcount, cost and budget

4 Final authority

Final decision after completed reviews

Defined permissions separate the requester from the approver

Saudi references within the decision workflow

5,041

occupations in the SSCO directory

2019 edition

599

education specializations

2020 education reference

Professional-category alerts include official authority links for review

What distinguishes Miyar's focus

The position anchors the institutional record

- | Traceable occupation and education references
- | Description, evaluation and reviews share a revision
- | A path for emerging roles without inventing official codes

Target customers

Proposed starting point

- | A university or organization with multiple review committees
- | Two departments with real position requests

Expansion after validation

- | Government entities and large enterprises
- | Hospitals and diversified business groups

Target segments for pilots and expansion

Proposed business model

1

Institutional subscription

Annual access to the organization workspace and team permissions

2

Setup and training

Configure frameworks and approval workflows, and train reviewers

3

Optional integrations

Connect HR systems around the organization's requirements

Pricing and willingness to pay will be tested with the pilot partner

Go-to-market plan

1

Pilot partner

A bounded trial using real descriptions and requests

2

Institutional contract

An adoption decision based on measured value and usability

3

Specialist channels

Partnerships with OD consultancies and HR implementation teams

Proposed plan, not existing contracts or partnerships

Progress to date

A working platform available to try

- | Arabic and English interfaces with an editable example
- | Position records, reviews and revision history
- | PDF, Word and Excel exports

Next milestone: measure value with a pilot institution

Current capabilities and expansion plan

Available now

- | Reference search and KPI suggestions from local rules
- | Organization grading and external specialist reports
- | Professional alerts and requirement-source review

To activate and validate

- | Generative and semantic models evaluated by specialists
- | Authorized integrations with organization systems
- | Measure accuracy, time and cost in a field pilot

Miyar does not calculate proprietary Korn Ferry scores or automatically guarantee compliance

A measurable institutional pilot

4

weeks

20

positions

2

departments

- | Compare package-preparation time before and during the pilot
- | Measure evidence completeness and reviewer agreement
- | Document feedback and the final adoption decision

Proposed scope to agree with the partner; these numbers are not achieved results
